

Changes and Corrections for the Assignment

1

On Page 6/16, a small change has been made to the pseudocode for the Fletcher hash function. Please download the latest version from the Ed resources section.

2

For Page 13/16, before the Notes and Hints section, add the following:

Your FUSE program will accept one custom option on the command line, **--files**, which will specify the filenames of the **file_data**, **directory_table** and **hash_data** files to use in that order. These will always be the last arguments specified in the command.

For example: `./myfuse -d mountpoint --files 01_file_data 01_directory_table 01_hash_data`

You do not need to parse these arguments yourself. The scaffold code **myfuse.c** automatically parses this option for you in the provided **main()** and makes the three filenames available as **char *** in the corresponding global variables **file_data_file_name**, **directory_table_file_name** and **hash_data_file_name**. Refer to the **myfuse.c** scaffold for details.

The updated **myfuse.c** file has been placed in a **scaffold.zip** file in the Ed resources section. If you reset your Ed submission to scaffold, you will also see the updated version.
